type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Key Insight

(Chang, Lopez-Escobar) Any sentence ϕ of $L_{\omega_1, \omega}$ can be coded by omitting a set of types in a countable first order theory.

Reduction

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

(Shelah) Any κ -categorical sentence of $L_{\omega_1, \omega}$ can be replaced (for categoricity purposes) by considering the atomic models of a first order theory, T .

A model $A \subset M \models T$ is atomic if every finite sequence from A realizes a principal (isolated) type over the empty set.

Our Context

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

T is a countable first order theory that admits quantifier elimination.

\mathbf{K} is the class of **atomic models** of T .

$\prec_{\mathbf{K}}$ is elementary submodel.

AMALGAMATION PROPERTY

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

The class \mathbf{K} satisfies the *amalgamation property* if for any situation with $A, M, N \in \mathbf{K}$:

there exists an N_1 such that

ZILBER'S PROGRAM FOR $(\mathcal{C}, +, \cdot, \exp)$

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Goal: Realize $(\mathcal{C}, +, \cdot, \exp)$ as a model of an $L_{\omega_1, \omega}$ -sentence discovered by the Hrushovski construction.

Objective A

Expand $(\mathcal{C}, +, \cdot)$ by a unary function f which behaves like exponentiation using a Hrushovski-like dimension function. Prove some $L_{\omega_1, \omega}$ -sentence Σ satisfied by $(\mathcal{C}, +, \cdot, f)$ is categorial and has quantifier elimination.

Objective B

Prove $(\mathcal{C}, +, \cdot, \exp)$ is a model of the sentence Σ found in Objective A.

Assumption

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

K has the amalgamation property **over models** and the joint embedding property.

This is a highly nontrivial assumption; it follows from categoricity up to \aleph_ω and the WGCH.

Amalgamation over arbitrary subsets is a still stronger hypothesis which misses mathematically important examples.

The Monster Model

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

If \mathbf{K} has the amalgamation property and the joint embedding property then we can work inside a monster model (universal domain) \mathcal{M} that is $|\mathcal{M}|$ -model homogeneous. That is,

If $N \prec_{\mathbf{K}} \mathcal{M}$ and $N \prec_{\mathbf{K}} M \in \mathbf{K}$ and $|M| < |\mathcal{M}|$ there is embedding of M into \mathcal{M} over N .

Stone Space I

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Ordinary $S(A)$

Let $A \subset M \in \mathbf{K}$. A syntactic 1-type is an ultrafilter in the Boolean algebra of 1-ary formulas with parameters from A .
 $S(A)$ is the set of types over A .

Since T eliminates quantifiers there is no dependence on the choice of M .

Stone Space II

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$S^*(A)$

Let $p \in S(A)$ where A is atomic.

Definition

$p \in S^*(A)$ means there is an atomic model M of T with $A \subseteq M$ such that p is realized in M .

Stone Space III

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$S_{at}(A)$

Let $p \in S(A)$ where A is atomic.

Definition

$p \in S_{at}(A)$ means Aa is atomic if a realizes p .

Simple Example

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Wake up!

T is the theory of an infinite set under equality. $M \models T$. p asserts $x \neq m$ for every $m \in M$. Then $p \in S_{at}(M)$.

Complicated Example

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Fact

(Marcus): There is a model M which is atomic, minimal and contains an infinite indiscernible set.

Stone Space V: Galois Types

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$\mathbb{S}(A)$

Fix a monster model \mathbb{M} of \mathbf{K} .

Definition

Let $A \subseteq M \prec_{\mathbf{K}} \mathbb{M}$ and $a \in \mathbb{M}$. The *Galois type* of a over M ($\in \mathbb{M}$) is the orbit of a under the automorphisms of \mathbb{M} which fix A .

The set of Galois types over A is denoted $\mathbb{S}(A)$.

Stone Space V: Galois Types: Subtleties

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Over sets

Clearly, for fixed \mathbb{M} , there exists $\pi : \mathbb{S}(A) \rightarrow S_{\mathbb{M}}(A)$.

But there is a choice of \mathbb{M} .

In general the relation between $\mathbb{S}(A)$ and $S_{at}(A)$ is unclear.

Over models

But for models: $\pi : \mathbb{S}(M) \rightarrow S_{at}(M)$.

There is only one 'monster model'.

And Shelah's notion corresponds to the 'monster model' version.

GALOIS TYPES: General Form

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Define:

$$(M, a, N) \cong (M, a', N')$$

if there exists N'' and strong embeddings f, f' taking N, N' into N'' which agree on M and with

$$f(a) = f'(a').$$

GALOIS TYPES: General Form

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Define:

$$(M, a, N) \cong (M, a', N')$$

if there exists N'' and strong embeddings f, f' taking N, N' into N'' which agree on M and with

$$f(a) = f'(a').$$

'The Galois type of a over M in N ' is the same as 'the Galois type of a' over M in N' '

if (M, a, N) and (M, a', N') are in the same class of the equivalence relation generated by \cong .

GALOIS TYPES: Algebraic Form

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Suppose \mathbf{K} has the amalgamation property.

Definition

Let $M \in \mathbf{K}$, $M \prec_{\mathbf{K}} \mathbb{M}$ and $a \in \mathbb{M}$. The Galois type of a over M is the orbit of a under the automorphisms of \mathbb{M} which fix M .

We say a Galois type p over M is realized in N with $M \prec_{\mathbf{K}} N \prec_{\mathbf{K}} \mathbb{M}$ if $p \cap N \neq \emptyset$.

Galois vrs Syntactic Types

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Syntactic types have certain natural locality properties.

locality Any increasing chain of types has at most one upper bound;

tameness two distinct types differ on a finite set;

compactness an increasing chain of types has a realization.

The translations of these conditions to Galois types do not hold in general.

Tameness

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Grossberg and VanDieren focused on the idea of studying
'tame' abstract elementary classes:

Definition

We say \mathbf{K} is (χ, μ) -tame if for any $N \in \mathbf{K}$ with $|N| = \mu$ if $p, q, \in \mathbb{S}(N)$ and for every $N_0 \leq N$ with $|N_0| \leq \chi$, $p \upharpoonright N_0 = q \upharpoonright N_0$ then $q = p$.

Tameness-Algebraic form

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Suppose \mathbf{K} has the amalgamation property.

\mathbf{K} is (χ, μ) -tame if for any model M of cardinality μ and any $a, b \in \mathcal{M}$:

Tameness-Algebraic form

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Suppose \mathbf{K} has the amalgamation property.

\mathbf{K} is (χ, μ) -tame if for any model M of cardinality μ and any $a, b \in \mathcal{M}$:

If for every $N \prec_{\mathbf{K}} M$ with $|N| \leq \chi$ there exists $\alpha \in \text{aut}_N(\mathcal{M})$ with $\alpha(a) = b$,

then there exists $\alpha \in \text{aut}_M(\mathcal{M})$ with $\alpha(a) = b$.

Consequences of Tame-ness

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tame-ness

Suppose \mathbf{K} has arbitrarily large models and amalgamation.

Theorem (Grossberg-Vandieren)

If $\lambda > \text{LS}(\mathbf{K})$, \mathbf{K} is λ^+ -categorical and $(\lambda, < \infty)$ -tame then \mathbf{K} is categorical in all $\theta \geq \lambda^+$.

Theorem (Lessmann)

If \mathbf{K} with $\text{LS}(\mathbf{K}) = \aleph_0$ is \aleph_1 -categorical and (\aleph_0, ∞) -tame then \mathbf{K} is categorical in all uncountable cardinals

Two Examples that are not tame

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

1 'Hiding the zero'

For each $k < \omega$ a class which is (\aleph_0, \aleph_{k-3}) -tame but not $(\aleph_{k-3}, \aleph_{k-2})$ -tame. Baldwin-Kolesnikov (building on Hart-Shelah)

2 Coding EXT

A class that is not (\aleph_0, \aleph_1) -tame.

A class that is not (\aleph_0, \aleph_1) -tame but is $(2^{\aleph_0}, \infty)$ -tame.
(Baldwin-Shelah)

Very Complicated Example

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Theorem. [Hart-Shelah / Baldwin-Kolesnikov] For each $3 \leq k < \omega$ there is an $L_{\omega_1, \omega}$ sentence ϕ_k such that:

- 1 ϕ_k has the disjoint amalgamation property;
- 2 Syntactic types determine Galois types over models of cardinality at most \aleph_{k-3} ;
- 3 But there are syntactic types over models of size \aleph_{k-3} that split into $2^{\aleph_{k-3}}$ -Galois types.

Very Complicated Example

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Theorem. [Hart-Shelah / Baldwin-Kolesnikov] For each $3 \leq k < \omega$ there is an $L_{\omega_1, \omega}$ sentence ϕ_k such that:

- 1 ϕ_k has the disjoint amalgamation property;
- 2 Syntactic types determine Galois types over models of cardinality at most \aleph_{k-3} ;
- 3 But there are syntactic types over models of size \aleph_{k-3} that split into $2^{\aleph_{k-3}}$ -Galois types.
- 4 ϕ_k is categorical in μ if $\mu \leq \aleph_{k-2}$;
- 5 ϕ_k is not \aleph_{k-2} -Galois stable;
- 6 But for $m \leq k - 3$, ϕ_k is \aleph_m -Galois stable;
- 7 ϕ_k is not categorical in any μ with $\mu > \aleph_{k-2}$.

Some further consequences

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

In this example:

- 1 $\pi : \mathbb{S}(M) \rightarrow S_{\mathbb{M}}(A)$ is **not** 1-1.
- 2 There exists an independent pair of countable models M_1, M_2 over M_0 so that $|S_{at}(M_1 M_2)| = 2^{\aleph_0}$

The last example exhibits the failure of 'automorphism stationarity'.

If $M_1 \approx M'_1$ over M_0 and both are independent from M_2 over M_0 then they are isomorphic over M_0 .

But in 2) they need not be automorphic over M_0 .

One more inequality

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

The Marcus example gives an uncountable atomic set A which cannot be embedded in an atomic model.

In fact, $S^*(A) \neq S_{\text{at}}(A)$.

From the Baldwin-Kolesnikov analysis there is a model M with

$$S^*(M) \neq S_{\text{at}}(M).$$

Locality and Tameness

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Definition

\mathbf{K} has (κ, λ) -local galois types if for every continuous increasing chain $M = \bigcup_{i < \kappa} M_i$ of members of \mathbf{K} with $|M| = \lambda$ and for any $p, q \in \mathbb{S}(M)$: if $p \upharpoonright M_i = q \upharpoonright M_i$ for every i then $p = q$.

Lemma

If $\lambda \geq \kappa$ and $\text{cf}(\kappa) > \chi$, then (χ, λ) -tame implies (κ, λ) -local.
If particular, (\aleph_0, \aleph_1) -tame implies (\aleph_1, \aleph_1) -local.

Whitehead Groups

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Definition

We say A is a *Whitehead group* if $\text{Ext}(A, \mathcal{Z}) = 0$. That is, every short exact sequence

$$0 \rightarrow \mathcal{Z} \rightarrow H \rightarrow A \rightarrow 0,$$

splits or in still another formulation, H is the direct sum of A and \mathcal{Z} .

Key Example

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Shelah constructed (page 228 of Eklof-Mekler, first edition) of a group with the following properties.

Fact

There is an \aleph_1 -free group G of cardinality \aleph_1 which is not Whitehead.

Moreover, there is a countable subgroup R of G such that G/R is p -divisible for each prime p .

THE AEC EXAMPLE

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Let \mathbf{K} be the class of structures $M = \langle G, Z, I, H \rangle$, where each of the listed sets is the solution set of one of the unary predicates $(\mathbf{G}, \mathbf{Z}, \mathbf{I}, \mathbf{H})$.

G is a torsion-free Abelian Group. Z is a copy of $(Z, +)$. I is an index set and H is a family of infinite groups.

Each model in \mathbf{K} consists of

- 1 a torsion free group G ,
- 2 a copy of \mathcal{Z}
- 3 and a family of extensions of Z by G .

Each of those extensions is coded by single element of the model so the Galois type of a point of this kind represents a specific extension. The projection and embedding maps from the short exact sequence are also there.

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$M_0 \prec_{\mathbf{K}} M_1$ if

M_0 is a substructure of M ,

but $\mathbf{Z}^{M_0} = \mathbf{Z}^M$

and \mathbf{G}^{M_0} is a pure subgroup of \mathbf{G}^{M_1} .

NOT LOCAL

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Lemma

$(\mathbf{K}, \prec_{\mathbf{K}})$ is not (\aleph_1, \aleph_1) -local. That is, there is an $M^0 \in \mathbf{K}$ of cardinality \aleph_1 and a continuous increasing chain of models M_i^0 for $i < \aleph_1$ and two distinct types $p, q \in \mathbb{S}(M^0)$ with $p \upharpoonright M_i^0 = q \upharpoonright M_i^0$ for each i .

Let G be an Abelian group of cardinality \aleph_1 which is \aleph_1 -free but not a Whitehead group. There is an H such that,

$$0 \rightarrow \mathcal{Z} \rightarrow H \rightarrow G \rightarrow 0$$

is exact but does not split.

WHY?

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Let $M_0 = \langle G, \mathcal{Z}, a, G \oplus Z \rangle$

Which Stone
Space?

right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$$\text{Let } M_0 = \langle G, \mathcal{Z}, a, G \oplus Z \rangle$$

$$M_1 = \langle G, \mathcal{Z}, \{a, t_1\}, \{G \oplus Z, H\} \rangle$$

WHY?

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

$$\text{Let } M_0 = \langle G, \mathcal{Z}, a, G \oplus Z \rangle$$

$$M_1 = \langle G, \mathcal{Z}, \{a, t_1\}, \{G \oplus Z, H\} \rangle$$

$$M_2 = \langle G, \mathcal{Z}, \{a, t_2\}, \{G \oplus Z, G \oplus Z\} \rangle$$

WHY?

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Let $M_0 = \langle G, \mathcal{Z}, a, G \oplus Z \rangle$

$M_1 = \langle G, \mathcal{Z}, \{a, t_1\}, \{G \oplus Z, H\} \rangle$

$M_2 = \langle G, \mathcal{Z}, \{a, t_2\}, \{G \oplus Z, G \oplus Z\} \rangle$

Let $p = \text{tp}(t_1/M^0, M^1)$ and $q = \text{tp}(t_2/M^0, M^2)$.

Since the exact sequence for \mathbf{H}^{M^2} splits and that for \mathbf{H}^{M^1} does not, $p \neq q$.

NOT \aleph_1 -LOCAL

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

But for any countable $M'_0 \prec_{\mathbf{K}} M_0$, $p \upharpoonright M'_0 = q \upharpoonright M'_0$, as

$$0 \rightarrow Z \rightarrow H'_i \rightarrow G' \rightarrow 0. \quad (1)$$

splits.

$$G' = \mathbf{G}(M'_0), H' = \pi^{-1}(t_i, G').$$

NOT \aleph_0 -TAME

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

It is easy to see that if $(\mathbf{K}, \prec_{\mathbf{K}})$ is (\aleph_0, \aleph_0) -tame then it is (\aleph_1, \aleph_1) -local, so

$(\mathbf{K}, \prec_{\mathbf{K}})$ is not (\aleph_0, \aleph_0) -tame.

So in fact, $(\mathbf{K}, \prec_{\mathbf{K}})$ is not (\aleph_0, χ) -tame for any χ .

Question

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Could this example be formulated more naturally as
 $\{Ext(G, Z) : G \text{ is torsion-free}\}$
(with projection and injection maps?)

Incompactness

What is the
right
type-space?
Humboldt
University
July 5, 2007

John T.
Baldwin

Which Stone
Space?

Tameness

Theorem

Assume $2^{\aleph_0} = \aleph_1$, and $\diamond_{\aleph_1}, \diamond_{S_1^2}$ where

$$S_1^2 = \{\delta < \aleph_2 : \text{cf}(\delta) = \aleph_1\}.$$

Then, the last example fails either (\aleph_1, \aleph_1) or (\aleph_2, \aleph_2) -compactness.

BECOMING TAME ??

Space?

Tameness

We say the AEC $(\mathbf{K}, \prec_{\mathbf{K}})$ *admits intersections* if for every $X \subseteq M \in \mathbf{K}$, there is a minimal closure of X in M . That is,
$$M \upharpoonright \bigcap \{N : X \subseteq N \prec_{\mathbf{K}} M\} = \text{cl}_M(X) \prec_{\mathbf{K}} M.$$

Theorem

There is an AEC in a countable language that admits intersections with Löwenheim-Skolem number \aleph_0 which is not (\aleph_0, \aleph_1) -tame but is $(2^{\aleph_0}, \infty)$ -tame.

Proof Sketch: Repeat the previous example but instead of letting the quotient be any torsion free group

- 1 insist that the quotient is an \aleph_1 -free group;
- 2 add a predicate R for the group R G/R is divisible by every prime p where G is Shelah's example of a non-Whitehead group.

This forces $|G| \leq 2^{\aleph_0}$ and then we get $(2^{\aleph_0}, \infty)$ -tame.
But \aleph_1 -free groups fail amalgamation ??

Lemma

For any AEC $(\mathbf{K}, \prec_{\mathbf{K}})$ which admits intersections there is an associated AEC $(\mathbf{K}', \prec_{\mathbf{K}})$ with the same (non) locality properties that has the amalgamation property.

Theorem

There is an AEC with the amalgamation property in a countable language with Löwenheim-Skolem number \aleph_0 which is not (\aleph_0, \aleph_1) -tame but is $(2^{\aleph_0}, \infty)$ -tame.

Which Stone
Space?

Tameness

- $\mathbb{S}(M)$ is the natural tool for Abstract elementary classes.
- $S_{\text{at}}(M)$ is Shelah's tool for $L_{\omega_1, \omega}$.
Excellence implies they agree.
- But Hyttinen and Kesala have interesting results with $S_{\mathbb{M}}(A)$ for finitary AEC.
