Course description

Math 533 is the first semester of our standard prelim graduate analysis sequence. As such, its goal is to familiarize you and pursue an in-depth study of several classical topics in analysis, including measure theory, integration, and $L^p$ spaces.

Analysis is a beautiful and venerable subject, whose main aim is to understand the properties of functions, and how they can be used to describe and predict the behavior of various physical systems. The prominence and importance of such study reaches far beyond the pure mathematical endeavor into numerous applications, among others in engineering, natural sciences, and economics.
