$$f_1(x) = DOUBLE(x) = 2x$$

 $f_2(x) = EXP(x) = 2^x$ 

Dhruv Mubayi From Ramsey Theory to arithmetic progressions and hypergrap

$$f_1(x) = DOUBLE(x) = 2x$$

 $f_2(x) = EXP(x) = 2^x$ 

EXP is obtained by applying DOUBLE x times starting at 1:

$$2^{x} = f_{2}(x) = 2 \cdot 2 \cdot 2 \cdot 2 \cdot 1 = f_{1}(f_{1}(f_{1}(\cdots f_{1}(f_{1}(1)))))$$

where we iterate x times.

#### Erdős-Turán Conjecture

Fix  $k \ge 2$  and  $\epsilon > 0$ . Then for *n* sufficiently large, every subset *S* of  $\{1, 2, ..., n\}$  with  $|S| > \epsilon n$  contains a *k*-term AP.

▲圖▶ ★ 国▶ ★ 国▶

#### Erdős-Turán Conjecture

Fix  $k \ge 2$  and  $\epsilon > 0$ . Then for *n* sufficiently large, every subset *S* of  $\{1, 2, ..., n\}$  with  $|S| > \epsilon n$  contains a *k*-term AP.

Szemerédi's Theorem

The Erdős-Turán Conjecture is true.

< ロ > < 回 > < 回 > < 回 > < 回 > <

#### Erdős-Turán Conjecture

Fix  $k \ge 2$  and  $\epsilon > 0$ . Then for *n* sufficiently large, every subset *S* of  $\{1, 2, ..., n\}$  with  $|S| > \epsilon n$  contains a *k*-term AP.

#### Szemerédi's Theorem

The Erdős-Turán Conjecture is true.

How large is "sufficiently large" ??

### Multidimensional Szemerédi Theorem (Furstenberg-Katznelson)

For every  $\epsilon > 0$ , every positive integer r and every finite subset  $X \subset \mathbb{Z}^r$  there is a positive integer n such that every subset S of the grid  $\{1, 2, \ldots, n\}^r$  with  $|S| > \epsilon n^r$  has a subset of the form  $\vec{a} + dX$  for some positive integer d.

- 4 周 ト 4 日 ト 4 日 ト - 日

### Multidimensional Szemerédi Theorem (Furstenberg-Katznelson)

For every  $\epsilon > 0$ , every positive integer r and every finite subset  $X \subset \mathbb{Z}^r$  there is a positive integer n such that every subset S of the grid  $\{1, 2, \ldots, n\}^r$  with  $|S| > \epsilon n^r$  has a subset of the form  $\vec{a} + dX$  for some positive integer d.

The Furstenberg-Katznelson proof gave no actual bound on n.

### Definition

A k-uniform hypergraph on  $[n] := \{1, 2, ..., n\}$  is a collection of k-element subsets of [n].

▲圖▶ ▲屋▶ ▲屋▶

### Definition

A k-uniform hypergraph on  $[n] := \{1, 2, ..., n\}$  is a collection of k-element subsets of [n].

#### Definition

A *k*-simplex is the *k*-uniform hypergraph on [k + 1] which consists of all possible *k*-element sets (there are  $\binom{k+1}{k} = k + 1$  of them).

イロト イポト イヨト イヨト

#### Question

Suppose we have a graph (= 2-uniform hypergraph) with few triangles (= 2-simplices). Can we delete few edges so that after removing the edges, there are no triangles?

(1日) (日) (日)

#### Question

Suppose we have a graph (= 2-uniform hypergraph) with few triangles (= 2-simplices). Can we delete few edges so that after removing the edges, there are no triangles?

### Rusza-Szemerédi (6,3) theorem

For every a > 0 there exists c > 0 with the following property. If G is any graph with n vertices and at most  $cn^3$  triangles, then it is possible to remove at most  $an^2$  edges from G to make it triangle-free.

・ロン ・回 とくほど ・ ほとう

### Theorem (Frankl-Rödl, Rödl-Schacht, Gowers)

For every a > 0 there exists c > 0 with the following property. If H is any k-uniform hypergraph with n vertices and at most  $cn^{k+1}$  k-simplices, then it is possible to remove at most  $an^k$  edges from H to make it k-simplex-free.

・ 同 ト ・ ヨ ト ・ ヨ ト

### Theorem (Frankl-Rödl, Rödl-Schacht, Gowers)

For every a > 0 there exists c > 0 with the following property. If H is any k-uniform hypergraph with n vertices and at most  $cn^{k+1}$  k-simplices, then it is possible to remove at most  $an^k$  edges from H to make it k-simplex-free.

A corollary to the removal lemma above is that we get an effective bound for n in the Furstenberg-Katznelson theorem.
